Evans Ademilua

Full-Stack Software Engineer

Ile-Ife, Osun, Nigeria (remote, overlaps US and EU working hours) | ademiluaolufemi@gmail.com |
linkedin.com/in/evansademilua | evansademilua.vercel.app | Upwork profile

PROFESSIONAL SUMMARY

Full-stack software engineer with over three years of experience building, reviewing and fixing production web applications in Python (FastAPI), TypeScript, React, Next.js and PostgreSQL (Supabase). Known for taking over unfamiliar or misbehaving codebases, isolating the root cause and shipping clean fixes without regressions.

Builds secure, role-based systems for service businesses, simple phone-first interfaces for non-technical users, and browser-based software that processes files on the user's own device. Integrates LLM APIs and runs speech recognition in the browser. Top Rated on Upwork with eight 5-star client reviews.

Open to remote, contract-based work in software engineering, code review and AI evaluation.

CORE COMPETENCIES

- Production debugging and root-cause analysis
- Authentication, role-based access and row-level security
- REST API and PostgreSQL database design
- Background jobs, file uploads and reliability
- Browser software: Web Workers, WebCodecs, WebAssembly
- LLM API integration and in-browser speech recognition
- Responsive, phone-first interface design
- Workflow automation with n8n and Slack bots
- Fixed-scope client delivery and clear written communication
- SEO, structured data and AI-search readiness

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML and CSS

Back end: FastAPI, Node.js, REST APIs, background workers and schedulers

Front end: React, Next.js, Tailwind CSS, responsive and phone-first layouts, accessibility basics

Browser platform: Web Workers, WebCodecs, WebAssembly, Web Audio, Canvas, File and Media APIs

Data and infrastructure: PostgreSQL, Supabase (authentication, row-level security), Vercel, Git and GitHub

AI and automation: OpenAI and Claude APIs, on-device speech recognition, n8n workflows, Slack bots

Low-code platforms: Bubble.io, FlutterFlow, Webflow

PROFESSIONAL EXPERIENCE

CEO and Founder, Large Technologies Ile-Ife, Osun, Nigeria (remote) Sep 2026 to Present

- Lead scoping, architecture and delivery of custom software for service businesses: internal tools, client portals, booking and lead-tracking systems, and AI-assisted features.
- CareTRAC: built a field and client coordination platform for a construction company. FastAPI backend with a dedicated scheduler service so slow photo uploads never block status updates, a React front end, and role-based permissions enforced at the database level. Went from scoping call to live product in two weeks.
- Sky Team Ife: built an internal operations dashboard for a multi-location organization on Vercel and Supabase, with per-user accounts scoped by role and center and enforced with row-level security.
- Common Ground Engineering: built a booking and lead-capture site integrating the Cal.com and Telegram APIs.

- Free online tools suite: designed, built and maintain 20+ browser-based tools, including a video editor, video compressor, audio editor, screen recorder, and PDF, image, invoice and QR tools. Every tool processes files on the user's device, so nothing is uploaded.
- Search and AI-search readiness: structured data, sitemaps, llms.txt and IndexNow so the site and tools can be found by search engines and AI assistants.

Web Developer (Freelance), Upwork Remote — Jan 2023 to Present

- Top Rated, with eight 5-star client reviews across Bubble.io application builds and fixes, n8n workflow automation, Slack bot development and AI integration work.
- Take over applications that behave unpredictably in production, isolate the actual fault and ship clean fixes without regressions. Clients consistently cite clear communication and delivery beyond expectations.

No-Code and Low-Code Developer (Freelance), Fiverr Remote — Dec 2022 to Present

- FlutterFlow and web development for small-business clients: MVPs, booking flows and internal tools delivered against fixed scopes.

Founder, 100bits Agency Remote — Mar 2024 to Present

- Design and build bespoke websites for small business clients, covering layout, copy and responsive behavior on phones, plus digital direct marketing. Own delivery end to end.

Sales Manager (Contract), Real Estate UK Remote — Jul 2020 to Aug 2023

- Lead generation and marketing outreach for UK property clients. Source of the real estate knowledge behind current product work.

SELECTED PROJECTS

CareTRAC FastAPI, React, PostgreSQL — portal.caregencon.com

- Client portal and field coordination for a construction company.
- Design decision: a separate scheduler service handles slow photo uploads so status updates stay instant. Permissions are enforced in the database, not only in the interface.

Sky Team Ife Vercel, Supabase — sky-team-ife.vercel.app

- Operations dashboard for a multi-location organization.
- Row-level security limits every user to their own role and center, so access rules cannot be bypassed from the front end.

Online video editor JavaScript, WebCodecs, Web Workers — evansademilua.vercel.app/tools/video-editor

- Phone-first editor with a multi-clip timeline, trimming, splitting, text, music, filters, speed, aspect ratios, video details and MP4 export, all in the browser.
- One shared renderer draws both the preview and the export, so the saved video matches what the user saw. Automatic captions come from a speech model hosted on the site and run in a Web Worker, so the interface stays smooth and no audio leaves the device.
- Includes undo and redo, a guided tour for first-time users, and an .srt subtitle export.

Free online tools suite JavaScript, Python site generator — evansademilua.vercel.app/tools

- 20+ tools for video, audio, images, PDFs, invoices, QR codes and more, built to work on phones and computers with no sign-up.
- Each tool was tested with generated real media and documents, including large PDFs, multi-channel audio and long timelines.

Billionaire Club Next.js, Vercel billionaireclub.vercel.app

- Community and education platform.

Common Ground Engineering Cal.com and Telegram APIs cge-site.vercel.app

- Booking and lead-capture site for a consulting firm.

ENGINEERING APPROACH

- Reproduce the problem first and read the surrounding code before changing anything.
- Check security, correctness and performance: access control, input handling, error paths and queries that slow down as data grows.
- Fix the cause rather than the symptom, then confirm nothing else broke.
- Test with realistic data: real files, edge cases and phone-sized screens.
- Explain every change in plain language so non-technical clients can decide with confidence.

EDUCATION

B.Eng, Electrical and Electronics Engineering, Obafemi Awolowo University, Nigeria 2020 to 2024
